

Cyril Morlet

Systems Engineer — Rust · Distributed Systems · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Systems engineer (12 years) with exchange DNA: at Bitfinex I owned deposit/withdrawal chain integrations where a bug loses customer funds. Rust in production: a chain indexer (axum, tokio, checkpoint streaming into Redis 8) serving sub-second reads, plus a maintained gas-sponsorship fork. Honest Rust depth: intermediate-plus with one production system, not a decade. Around it: deep distributed systems — real-time messaging and eventing for live game backends, WebSocket fanout across 1,300+ users' sessions, storage on Redis and FalkorDB — production Kubernetes operated solo, observability with Prometheus and Sentry, incident response as my own on-call. Web3-native since 2018. Based in Da Nang, Vietnam.

SKILLS

Rust: production chain indexer (axum, tokio, sui-indexer-alt-framework), gas-sponsorship service maintenance (MystenLabs sui-gas-pool fork), checkpoint streaming pipelines

Ethereum & Chains: EVM chain integrations at Bitfinex — JSON-RPC clients, reorgs, finality thresholds, fee accounting; Solidity; exchange listings; Sui Move

Distributed Systems: real-time game servers (Java 25, 1,300+ players live), event-driven services, low-latency reads (Redis 8 JSON/search), WebSocket, horizontal scaling on Kubernetes

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, GraphQL, REST APIs

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, CI/CD, Prometheus

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Built and operate a Rust chain indexer in production: streams blockchain checkpoints (sui-indexer-alt-framework, axum, tokio) into Redis 8 JSON/search indexes serving a sub-second public REST API — keyless and horizontally scalable.
- Maintain a Rust gas-sponsorship service (fork of MystenLabs sui-gas-pool) powering gasless transactions, with a fail-closed sponsorship API built around it.
- Built and operate real-time distributed backends for live games: message fanout over WebSocket to 1,300+ users' sessions, eventing and storage on Redis and FalkorDB, low-latency netcode — solo, with on-call incident response.
- Run self-hosted production Kubernetes (Talos OS): GitOps, Prometheus observability, fail-closed services — reliability discipline carried over from exchange money paths.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript, EVM tooling).
- Operated Ethereum-family and other L1/L2 client integrations under production load — JSON-RPC client operation, reorg handling, finality thresholds, fee accounting — where a bug loses customer funds.
- Shipped the exchange's Sui listing end-to-end.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — fully on-chain MMORPG — 9 Move packages, Rust indexer, sim!"chainreplay parity · aresrpg.world

sui-checkpoint-reader — open-source blockchain checkpoint-file processing library · github.com/aresrpg/sui-checkpoint-reader

Hydre.io — 18+ open-source npm libraries · github.com/HydreIO

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
