

Cyril Morlet

Senior Full Stack Engineer — JavaScript/TypeScript · Kubernetes · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Senior full stack engineer, 12 years, JavaScript and TypeScript at the core: Node.js backends, React 19 and Vue 3 frontends, GraphQL end to end (authored GraphQL server and client libraries). I run production on self-hosted Kubernetes with real observability: Prometheus metrics, Sentry error tracking, logs and tracing, incident triage as the solo on-call for a live game serving 1,300+ users. Distributed systems background from Bitfinex exchange pipelines, where monitoring and troubleshooting under pressure was the job. Based in Da Nang, Vietnam.

SKILLS

Full Stack: JavaScript, TypeScript, Node.js, React 19, Vue 3, GraphQL (authored libraries), REST APIs, WebSocket, Tailwind CSS

Observability & Support: Prometheus, Sentry, logs/metrics/tracing, monitoring and alerting, incident triage, on-call ownership, root cause analysis

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, Helm, CI/CD, AWS

Data: Redis 8 (JSON/search), FalkorDB graph, schema design, custom indexers

Backend Depth: Java 25, Bun, Rust (working), microservices, exchange pipelines at Bitfinex

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Operate a ~600K-line platform end to end: Node.js/Bun services, React 19 frontend, GraphQL APIs, Redis 8, custom Rust indexer — full monitoring with Prometheus and Sentry (metrics, logs, error tracing).
- Solo on-call for a live Java 25 game backend (1,300+ users): incident triage, root cause analysis of distributed-systems failures, capacity and reliability on self-hosted Kubernetes.
- Authored 18+ open-source npm libraries including GraphQL servers/clients and WebSocket tooling (HydreIO org).
- Engineered an agentic development harness (Claude Code multi-agent + mechanical gates) enforcing code review and testing discipline.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
