

Cyril Morlet

Integration Engineer — Blockchain Ecosystems · JavaScript & Rust · ex-Bitfinex
fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Engineer (12 years) who has lived on both sides of blockchain integration. At Bitfinex I integrated L1/L2 chains into a top-tier exchange: deposit/withdrawal pipelines, JSON-RPC clients, reorgs, finality, fee accounting. Since then I build the ecosystem tooling myself: a Rust chain indexer streaming checkpoints into sub-second APIs, a typed transaction SDK, smart contracts in production (Sui Move, ~60K lines across 9 packages; Solidity DeFi background), zkLogin onboarding and gas sponsorship. JavaScript/TypeScript primary for 15 years, working Rust, deep DeFi and cross-chain exposure. Based in Da Nang, Vietnam (ICT).

SKILLS

Integration: chain integration lifecycle at Bitfinex (listings, deposits/withdrawals), JSON-RPC clients, custom indexers, SDK design, EVM tooling, cross-chain flows

Languages: JavaScript, TypeScript, Node.js (15y), Rust (production indexer), Java, Sui Move, Solidity

DeFi & Web3: smart contract development (Sui Move, Solidity), DeFi mechanics, on-chain marketplaces, zkLogin, gas sponsorship, wallets

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, CI/CD, Prometheus, Sentry

Quality: testing gates (gold/anchor/unit), CodeQL, semgrep, observability, open-source discipline (110+ public repos)

EXPERIENCE

Founder & Solo Engineer — Independent Products Oct 2024 – Present · Remote

- Built the full ecosystem tooling layer for AresRPG: typed transaction SDK, Rust chain indexer with sub-second reads, gas sponsorship service, zkLogin onboarding — the developer-facing surface of an on-chain product.
- Shipped 9 production Move packages (~60K lines) including an on-chain marketplace; Solidity DeFi background (yield aggregator, on-chain games).
- Lead a team of 3 on a ~600K-line platform (TypeScript, Rust, Move) developed in the open — docs, contribution guides, and integration examples for third-party developers.
- Authored 18+ open-source npm libraries and 3 MCP servers; a decade of developer-tooling open source (110+ public repos).

Blockchain Integration Specialist — Bitfinex Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO

SELECTED PROJECTS

AresRPG — fully on-chain MMORPG on Sui — 9 Move packages, Rust indexer · aresrpg.world

Hytale MMORPG server — live Java 25 game server, 1,300+ players, solo-built and operated

Hydre.io — 18+ open-source npm libraries · github.com/HydreIO

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
