

Cyril Morlet

Senior Applied AI Engineer — Coding Agents · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Senior engineer (12 years) whose daily work IS coding agents: I engineered a Claude Code multi-agent harness that ships my ~600K-line platform — planning and briefs, tool use via MCP servers I authored, context management across long-running workflows, evaluation gates (tests, CodeQL, semgrep) and guardrails agents cannot bypass. Built Noxant, agentic CI/CD where agents do autonomous code generation, verification and publishing on Kubernetes. Deep prompt engineering and model routing across LLM providers (Claude, OpenAI Codex). TypeScript/Node.js primary. Production discipline from Bitfinex exchange pipelines; my live products serve 1,300+ users.

SKILLS

Applied AI: coding agents in production (Claude Code, OpenAI Codex), planning + tool use + context management, prompt engineering, evaluation harnesses, guardrails, multi-agent orchestration, MCP authorship

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL, REST APIs, WebSocket

Infrastructure: Docker, Kubernetes (self-hosted production), CI/CD, GitOps, Prometheus, Sentry

Data: Redis 8 (JSON/search), embeddings retrieval, FalkorDB graph, custom indexers

Web3: exchange integration at Bitfinex, Sui, EVM tooling

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Engineered a multi-step coding-agent harness (Claude Code): planning briefs, N-agent implementation/review consensus, context management for long-running workflows, model routing across LLM providers — every change passes mechanical evaluation gates before merge.
- Built Noxant, agentic CI/CD on Kubernetes: autonomous code generation, verification, and publishing in Docker-in-Docker sandboxes with guardrails and fail-closed design.
- Authored MCP servers for agent tool use and memory: sui-graphql-mcp, semantic-memory-mcp (Redis + embeddings retrieval), agent-pool (persistent multi-agent orchestration for token efficiency).
- Lead a team of 3 on a ~600K-line TypeScript/Rust/Move platform serving 1,300+ users across its products — full observability (Prometheus, Sentry).

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
