

Cyril Morlet

AI Platform Engineer — Agent Runtimes · TypeScript · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Engineer (12 years) building AI infrastructure in production: a TypeScript-centered agent runtime — multi-agent orchestration (Claude Code), tool orchestration via MCP servers I authored, context management, evaluation gates, and full observability (Prometheus, Sentry) — that ships my ~600K-line platform. Built Noxant, agentic CI/CD with autonomous agents on Kubernetes. Comfortable debugging non-deterministic agent behavior with evidence-first discipline: reproduce, bisect, gate. Ex-Bitfinex exchange backend; my own live products fund my obsession with reliability.

SKILLS

AI Platform: agent runtimes, multi-agent orchestration (Claude Code, OpenAI Codex, LLM provider routing), tool orchestration (MCP authorship), context management, evaluation pipelines, debugging non-deterministic systems

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL, REST APIs, WebSocket

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, CI/CD, observability (Prometheus, Sentry)

Data: Redis 8 (JSON/search), embeddings retrieval, FalkorDB graph, schema design

Web3: exchange integration at Bitfinex, Sui, EVM tooling

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Built and operate a production agent runtime: Claude Code multi-agent orchestration with model routing, context management, and mechanical evaluation gates (tests, CodeQL, semgrep) — every agent change verified before merge.
- Built Noxant, agentic CI/CD on Kubernetes: autonomous agents execute, verify, and publish in Docker-in-Docker sandboxes — fail-closed, observable, cost-bounded.
- Authored MCP servers for tool orchestration and agent memory: sui-graphql-mcp, semantic-memory-mcp (Redis + embeddings), agent-pool (persistent multi-agent pooling).
- Lead a team of 3 on a ~600K-line TypeScript platform with Prometheus/Sentry observability and a Rust indexer serving sub-second reads.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
