

Cyril Morlet

Senior AI Engineer — Production LLM Agent Systems · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Senior engineer (12 years) shipping production LLM agent systems — not demos: an agentic development harness (Claude Code multi-agent orchestration + OpenAI Codex (GPT) cross-vendor review, with mechanical evaluation gates) shipping a ~600K-line platform; agentic CI/CD (Noxant) where agents execute, verify, and publish autonomously on Kubernetes; authored MCP servers for production tool-calling against databases and APIs (Redis, GraphQL, blockchain). Regulated financial background: exchange deposit/withdrawal pipelines at Bitfinex — security-critical, sensitive-data systems where bugs lose customer funds. TypeScript/Node.js primary; Python at tooling level; strong observability and CI/CD discipline.

SKILLS

AI Engineering: LLM agent systems in production, multi-agent orchestration (Claude Code, OpenAI Codex/GPT), MCP + tool-calling, agent evaluation gates, context engineering, agent memory (Redis + embeddings)

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL, REST APIs, WebSocket; Python (tooling)

Security & Regulated: exchange money paths at Bitfinex (deposits/withdrawals), fail-closed design, sandbox isolation (DinD), zero-trust infra (SOPS, Cilium)

Infrastructure: Kubernetes, CI/CD, observability (Prometheus, Sentry), Docker, GitOps

Databases: Redis 8 (JSON/search), FalkorDB graph, schema design, custom indexers

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Engineered a production agent harness: Claude Code multi-agent orchestration with OpenAI Codex cross-vendor review — mechanical evaluation gates (gold/anchor/unit tests, CodeQL, semgrep) verify every agent-produced change before merge.
- Built Noxant, agentic CI/CD on Kubernetes: agents execute, verify, and publish tasks autonomously inside Docker-in-Docker sandboxes — isolation and fail-closed design.
- Authored production MCP servers for agent tool-calling against databases and APIs: sui-graphql-mcp, semantic-memory-mcp (Redis + embeddings), agent-pool (multi-agent orchestration).
- Lead a team of 3 on a ~600K-line platform (TypeScript/Rust/Move) with full observability (Prometheus, Sentry) and a Rust indexer serving sub-second reads.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydrIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
