

Cyril Morlet

Senior AI Engineer — Autonomous Agent Systems · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

AI engineer with 12 years shipping production systems end-to-end — TypeScript, Node.js, Java. I build and operate autonomous AI agent systems in live environments: an agentic development harness (Claude Code multi-agent orchestration under mechanical quality gates) that ships my ~600K-line on-chain MMORPG; authored MCP (Model Context Protocol) servers for agent tool use and memory; and agentic CI/CD where LLM-powered agents execute, verify, and publish with no human in the loop. Domains: real-time gaming (live MMORPG, 1,300+ players) and crypto trading — ex-Bitfinex, production exchange pipelines.

SKILLS

AI Agents: multi-agent orchestration (Claude Code daily, OpenAI Codex), tool use via MCP (authored 3 servers), context engineering, agent memory management (Redis + embeddings), autonomous execution pipelines, LLM output verification gates

Backend: Node.js, JavaScript, TypeScript, Java 25, Bun, Rust (working), GraphQL, REST APIs, WebSocket

Trading & Web3: crypto exchange integration at Bitfinex (deposits/withdrawals/listings), Sui, zkLogin, gas sponsorship, EVM

Infrastructure: Kubernetes, Docker-in-Docker sandboxes, GitOps, CI/CD, Prometheus, Sentry

Frontend: React 19, Vue 3, Three.js, Tailwind CSS

EXPERIENCE

Founder & Solo Engineer — Independent Products Oct 2024 – Present · Remote

- Engineered an agentic development harness: Claude Code multi-agent orchestration — N-agent implementation/ review consensus under mechanical quality gates (gold/anchor/unit, CodeQL, semgrep); agents implement, review, and verify every task end-to-end.
- Built Noxant, agentic CI/CD on Kubernetes: LLM-powered agents autonomously execute, verify, and publish tasks inside Docker-in-Docker sandboxes.
- Authored MCP servers powering agent tool use and memory management: sui-graphql-mcp (blockchain queries), semantic-memory-mcp (Redis + embeddings, confidence decay, consolidation), agent-pool (persistent multi-agent orchestration).
- Lead a team of 3 building AresRPG, a fully on-chain MMORPG on Sui: ~600K lines across 12 workspaces — React 19, Bun backend, 9 Move packages, Rust indexer with sub-second queries.

Blockchain Integration Specialist — Bitfinex Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydrIO.

SELECTED PROJECTS

AresRPG — fully on-chain MMORPG on Sui — built end-to-end by the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
