

Cyril Morlet

Senior Full Stack Engineer — Backend-Oriented · AI-Augmented Development · ex-Bitfinex

fetch@sceat.xyz · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Full stack engineer with 12 years shipping production systems end-to-end, backend-oriented: Node.js, Java, TypeScript. At Bitfinex (top-tier crypto exchange) I owned blockchain deposit/withdrawal pipelines in production. AI-augmented development is my daily workflow — I drive Claude Code multi-agent pipelines on every task and built Noxant, an agentic CI/CD platform where AI agents ship their own work. Product mindset: I design, build, deploy, and operate my own live products, from database design to frontend.

SKILLS

Backend: Node.js, Java 25, TypeScript, Bun, REST APIs, WebSocket, microservices

AI Tooling: Claude Code (daily, multi-agent orchestration), agentic CI/CD (built Noxant), AI-orchestrated code review, context engineering

Frontend: React 19, Vue 3, Tailwind CSS v4, Three.js

Databases: FalkorDB (graph), Redis, schema & database design, custom blockchain indexers

Infrastructure: Kubernetes, Docker, GitOps, Helm, CI/CD, AWS

Web3: Sui Move, Solidity, EVM tooling, exchange chain integration

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Built and operate a live MMORPG server in Java 25 (~370K lines of code) serving 1,300+ unique players — solo, end-to-end: gameplay backend, database design (FalkorDB graph, Redis), Kubernetes deployment, on-call.
- Built Noxant, an agentic CI/CD platform: AI agents execute, verify, and publish their own tasks in Docker-in-Docker sandboxes on Kubernetes.
- Lead a team of 3 on AresRPG, an onchain MMORPG — React 19 frontend, Bun backend, custom blockchain indexer for sub-second queries.
- AI-augmented workflow on every task: Claude Code with multi-agent orchestration for implementation, review, and verification.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

Noxant — agentic CI/CD on Kubernetes — AI agents autonomously execute, verify, and publish · noxant.io

AresRPG — onchain MMORPG on Sui, sub-second chain-indexed gameplay, team of 3 · aresrpg.world

Hydre.io — 18+ open-source npm libraries · github.com/HydreIO

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
