

Cyril Morlet

Senior Software Engineer — Agent Engineering · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Engineer with 12 years shipping production systems. I build with agents daily and opinionatedly: a multi-step agentic development harness (Claude Code multi-agent orchestration, N-agent consensus, mechanical evaluation gates) ships my ~600K-line platform; agentic CI/CD (Noxant) runs autonomous execute/verify/publish loops on Kubernetes; authored MCP servers for agent tool use and memory, including retrieval over embeddings (semantic-memory-mcp). I make agent systems reliable, observable (Prometheus, Sentry), and cost-bounded (token-budget discipline, model routing by work shape). TypeScript/Node.js primary, GraphQL library author, Docker/Kubernetes deep. Ex-Bitfinex: production exchange pipelines. LLM developer tooling is where I live.

SKILLS

Agent Engineering: multi-step agentic systems in production (Claude Code, OpenAI Codex), evaluation gates, cost/latency budgeting, model routing by work shape, MCP authorship, agent memory + retrieval (embeddings)

Backend: TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL (authored server/client libraries), REST APIs, WebSocket

Infrastructure: Docker, Kubernetes (self-hosted production), GitOps, CI/CD, Prometheus, Sentry

Data: Redis 8 (JSON/search), embeddings retrieval, FalkorDB graph, schema design, custom indexers

Web3: exchange integration at Bitfinex, Sui, EVM tooling, Solidity

EXPERIENCE

Founder & Solo Engineer — Independent Products Oct 2024 – Present · Remote

- Engineered a multi-step agentic development system: Claude Code multi-agent orchestration with model routing by work shape and N-agent implementation/review consensus — every agent change passes mechanical evaluation gates (gold/anchor/unit tests, CodeQL, semgrep) before merge.
- Built Noxant, agentic CI/CD on Kubernetes: agents execute, verify, and publish autonomously in Docker-in-Docker sandboxes — reliable, observable, cost-bounded.
- Authored MCP servers: sui-graphql-mcp (GraphQL tool use), semantic-memory-mcp (retrieval over Redis + embeddings with confidence decay), agent-pool (persistent multi-agent orchestration for token efficiency).
- Lead a team of 3 on a ~600K-line platform with full observability (Prometheus, Sentry) and sub-second retrieval infrastructure (custom Rust indexer).

Blockchain Integration Specialist — Bitfinex Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
