

Cyril Morlet

AI Product Engineer — Agents & MCP · TypeScript/Node.js · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Engineer (12 years, JavaScript/TypeScript core) who builds exactly this: LLM-powered agents with MCP servers, skills, and tools in production. I authored three MCP servers (sui-graphql-mcp for tool use, semantic-memory-mcp for agent memory over Redis and embeddings, agent-pool for orchestration) and engineered a Claude Code multi-agent harness with context engineering, evals, and mechanical gates that ships my ~600K-line platform. Observability and incident response are personal: Prometheus and Sentry telemetry over self-hosted production, root cause analysis where downtime costs my own revenue. Ex-Bitfinex exchange backend. Python at tooling level, honestly stated; TypeScript/Node.js is where I am deepest.

SKILLS

Agent Engineering: multi-step agentic systems in production (Claude Code, OpenAI Codex), evaluation gates, cost/latency budgeting, model routing by work shape, MCP authorship, agent memory + retrieval (embeddings)

Backend: TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL (authored server/client libraries), REST APIs, WebSocket

Infrastructure: Docker, Kubernetes (self-hosted production), GitOps, CI/CD, Prometheus, Sentry

Data: Redis 8 (JSON/search), embeddings retrieval, FalkorDB graph, schema design, custom indexers

Web3: exchange integration at Bitfinex, Sui, EVM tooling, Solidity

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Authored production MCP servers powering agent tools and memory: sui-graphql-mcp (tool use over GraphQL), semantic-memory-mcp (Redis + embeddings retrieval, confidence decay), agent-pool (persistent multi-agent orchestration).
- Engineered a multi-step agent harness (Claude Code): context engineering, model routing, N-agent consensus, evals and mechanical gates (tests, CodeQL, semgrep) on every change.
- Built Noxant, agentic CI/CD on Kubernetes: autonomous execute/verify/publish loops in Docker-in-Docker sandboxes.
- Operate a ~600K-line platform with production telemetry (Prometheus, Sentry) and incident response as the solo on-call — root cause analysis under real stakes.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
