

Cyril Morlet

Senior Backend Engineer — TypeScript/Node.js · Distributed Systems · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Backend engineer, 12 years, JavaScript/TypeScript/Node.js at the core: exchange data pipelines at Bitfinex (deposit/withdrawal across L1/L2s — code where bugs lose customer funds), high-throughput real-time backends for live games, REST and GraphQL API design (authored GraphQL server and client libraries used in production), Redis 8 JSON/search, Docker and self-hosted Kubernetes. I operate a ~600K-line platform with full observability (Prometheus, Sentry) and a Rust indexer for sub-second reads. A decade of open-source: 18+ published npm libraries, 110+ public repos.

SKILLS

AI Platform: agent runtimes, multi-agent orchestration (Claude Code, OpenAI Codex, LLM provider routing), tool orchestration (MCP authorship), context management, evaluation pipelines, debugging non-deterministic systems

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL, REST APIs, WebSocket

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, CI/CD, observability (Prometheus, Sentry)

Data: Redis 8 (JSON/search), embeddings retrieval, FalkorDB graph, schema design

Web3: exchange integration at Bitfinex, Sui, EVM tooling

EXPERIENCE

Founder & Solo Engineer — Independent Products Oct 2024 – Present · Remote

- Lead a team of 3 on a ~600K-line TypeScript platform: high-throughput REST APIs (rate-limited, ETag'd), Redis 8 JSON/search data pipelines, custom Rust blockchain indexer serving sub-second reads under production load.
- Built and operate a live real-time game backend in Java 25 (83K+ lines, 1,300+ unique players) — solo, on self-hosted Kubernetes with Prometheus/Sentry observability.
- Authored 18+ open-source npm libraries (GraphQL servers/clients, WebSocket multiplexing, Redis clients — HydreIO org) plus MCP servers for AI tooling.
- Engineered an agentic development harness (Claude Code multi-agent + mechanical gates) enforcing API design and testing discipline.

Blockchain Integration Specialist — Bitfinex Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line platform shipped through the agent harness · aresrpg.world

Noxant — agentic CI/CD — autonomous execute/verify/publish on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
