

Cyril Morlet

Senior Backend Engineer — TypeScript/Node.js · Trading & Chain Infrastructure · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Backend engineer with 12 years shipping production distributed systems, JavaScript/TypeScript and Node.js at the core the whole way. At Bitfinex, a top-tier crypto trading exchange, I owned blockchain deposit/withdrawal pipelines: transaction processing across L1/L2s, reorg handling, finality thresholds, fee accounting — backend code where a bug loses customer funds. Since then I build and operate my own web3 platform: ~600K lines, wallet flows (zkLogin onboarding, sponsored transactions), a Rust chain indexer serving sub-second reads, and real-time services on Redis and WebSocket. Reliability is the discipline I optimize for.

SKILLS

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), WebSocket, REST APIs, GraphQL, microservices

Wallets & Transactions: zkLogin onboarding, sponsored transactions / gas stations, PTB composition (Sui), EVM tooling, exchange deposit/withdrawal pipelines, listings

Distributed Systems: event-driven services, real-time netcode, custom blockchain indexers, low-latency reads (Redis 8 JSON/search), horizontal scaling on Kubernetes

Quality: testing discipline (gold/anchor/unit gates), CodeQL, semgrep, CI/CD, observability (Prometheus, Sentry)

Infrastructure: Kubernetes (self-hosted production), Docker, GitOps, Helm

EXPERIENCE

Founder & Solo Engineer — Independent Products

Oct 2024 – Present · Remote

- Lead a team of 3 building AresRPG (~600K lines, TypeScript-centered): wallet onboarding with zkLogin, fail-closed sponsored-transaction service, on-chain marketplace, custom Rust blockchain indexer with sub-second queries under production load.
- Built and operate a live game server in Java 25 (83K+ lines) serving 1,300+ unique players — solo: real-time backend, low-latency netcode, Redis, Kubernetes, on-call.
- Engineered an agentic development harness (Claude Code multi-agent with mechanical test gates) enforcing testing and code-quality discipline at scale.

Blockchain Integration Specialist — Bitfinex

Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi

Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy

Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source

Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO

SELECTED PROJECTS

AresRPG — fully on-chain MMORPG on Sui — 9 Move packages, Rust indexer · aresrpg.world

Hytale MMORPG server — live Java 25 game server, 1,300+ players, solo-built and operated

Hydre.io — 18+ open-source npm libraries · github.com/HydreIO

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
