

Cyril Morlet

Staff-level Infrastructure Engineer — Kubernetes · Observability · ex-Bitfinex

fetch@sceat.xyz · +380 68 978 1786 · sceat.xyz · github.com/sceat · Fully Remote · UTC+8

SUMMARY

Engineer (12 years) doing hands-on SRE work end to end: a self-hosted production Kubernetes cluster (Talos OS) with 33 Helm releases, GitOps via Helmfile, Cilium network policy, SOPS secrets, Longhorn storage and zero trust ingress — designed and operated solo, on-call included, serving a live game with 1,300+ users. Observability and monitoring with Prometheus and Sentry; incident response where downtime costs my own revenue. AWS and Docker from years of microservices work. JavaScript/TypeScript and Java on the software side. Honest gaps versus your listed stack: my infrastructure-as-code is Helmfile/GitOps rather than Terraform, and my Kubernetes is self-hosted rather than EKS — the operational muscle transfers.

SKILLS

Infrastructure: Kubernetes (self-hosted production, Talos OS), Docker, Helm, Helmfile, GitOps, Cilium, Longhorn, SOPS, Cloudflare Tunnels, AWS, MinIO

Observability & Reliability: Prometheus, Sentry, monitoring and alerting, incident response, on-call ownership, fail-closed design

Backend: JavaScript, TypeScript, Node.js, Java 25, Bun, Rust (working), GraphQL, REST APIs

Security: zero trust ingress, SOPS secrets, sandbox isolation (DinD), exchange money paths at Bitfinex

CI/CD: GitHub Actions multi-workflow gates, CodeQL, semgrep, agentic pipelines

EXPERIENCE

Founder & Solo Engineer — Independent Products Oct 2024 – Present · Remote

- Operate a self-hosted production Kubernetes cluster solo: Talos OS, 33 Helm releases across 4 namespaces, GitOps via Helmfile, Cilium, SOPS-encrypted secrets, Longhorn distributed storage, Cloudflare Tunnels zero trust ingress — infra repo active daily.
- On-call for a live game serving 1,300+ unique players (Java 25 backend): monitoring, incident response, capacity, and reliability — downtime is my own lost revenue.
- Built Noxant, agentic CI/CD on Kubernetes: Docker-in-Docker sandboxes, fail-closed pipelines, autonomous verification loops.
- Full observability across a ~600K-line platform: Prometheus metrics, Sentry error tracking, sub-second read paths (Redis 8, Rust indexer).

Blockchain Integration Specialist — Bitfinex Apr 2022 – Oct 2024 · Remote

- Owned end-to-end blockchain integrations for production deposit and withdrawal pipelines at a top-tier crypto exchange (Node.js, TypeScript).
- Integrated multiple L1/L2 chain backends into the exchange — including the Sui listing — and maintained them under production load.
- Owned chain-specific edge cases — reorgs, finality thresholds, fee accounting — where a bug loses customer funds.

Fullstack Developer — Affinidi Jan 2021 – Apr 2022 · Kyiv, Ukraine (remote)

- Shipped React + Node.js microservices for self-sovereign identity and credential verification — REST APIs, Docker, AWS.
- Delivered across distributed teams spanning EU, Singapore, and India.

CTO & Co-founder — Sidy Jan 2019 – Jan 2021 · Montpellier, France

- Led a 4-engineer team building a real-estate platform from zero to production; owned architecture, infrastructure, and hiring.

Software Engineer — Freelance & Open-Source Jan 2015 – Jan 2021 · France (remote)

- Created and maintain 18+ open-source npm libraries (auth, real-time graphs, transport, storage) — github.com/HydreIO.

SELECTED PROJECTS

AresRPG — ~600K-line on-chain MMORPG shipped through the guardrailed agent harness · aresrpg.world

Noxant — agentic CI/CD — sandboxed autonomous agents on Kubernetes · noxant.io

MCP servers — sui-graphql-mcp · semantic-memory-mcp · agent-pool · github.com/sceat

EDUCATION & LANGUAGES

Self-taught engineer — shipping production code since 2014; open-source maintainer since 2015.

Languages: French (native), English (fluent)
